Smilin' Eyes is a new variety released by the Tri-State Potato Research and Breeding team. It is an outstanding yellow fleshed, yellow skinned round tuber with pink “*smilin' eyes.*”

It has exceptional flavor and excellent storage characteristics, producing light uniform colored fries, and flavor when baked, boiled or microwaved.

Requires medium to high levels of Nitrogen and has medium resistance to metribuzin.

Weakness:
Susceptible to *rhizoctonia*.

The information contained within this flyer was supplied by researchers of the Northwest Potato Variety Development Program and their collaborators.
